AI Job Search Assistant

One-page guide - install it, run it, make it yours

It finds jobs for you, keeps every lead and status in one tracker, and rewrites your resume for each role using only what's already on it. Nothing invented, ever.

1 INSTALL (needs Python 3.10+)

```
git clone https://github.com/ananyajoshi0203-cpu/ai-job-search-assistant.git
cd ai-job-search-assistant
python3 -m venv .venv && source .venv/bin/activate
python -m pip install -e .
```

2 RUN

Double-click run.command (Mac) or type: jobhunt app - the app opens in your browser. Buttons do everything: Run crawl - Tailor - All roles - Export - Apply / No.

3 MAKE IT YOURS

Copy config.example.yaml to config.yaml. Put in YOUR master resume path, roles, locations and keywords. Add the company boards you want (Greenhouse / Lever / Ashby tokens). Set your own key: export OPENAI_API_KEY=your-key

4 WHAT IT DOES

Crawls job sources - skips roles you've seen - checks each posting is still open - saves every lead and status in a tracker that persists on your disk - and for each role builds a one-page resume that rewords your real experience with the job's keywords, highlighting what matches.

Demo (tap or scan): muse.ai/s/ai-job-search-assistant-demo-gxz6wxtulxcgixs/...

Scan: try the demo

Full guide + code: github.com/ananyajoshi0203-cpu/ai-job-search-assistant

Scan: GitHub repo

Still in progress: applying is manual for now - you submit yourself; the tool does the finding, tracking and resume tweaking. Full details are in the repo README.
