AI Job Search Assistant

Finds jobs, keeps every lead and status in one tracker, and rewrites your resume for each role — **using only what's already on it. Nothing invented.**

1 INSTALL

Needs Python 3.10+.

```
git clone https://github.com/ananyajoshi0203-cpu/ai-job-search-assistant.git
cd ai-job-search-assistant
python3 -m venv .venv && source .venv/bin/activate
python -m pip install -e .
```

Then set your own key: `export OPENAI_API_KEY=your-key`

2 RUN

Double-click `run.command`, or run:

```
jobhunt app
```

Buttons do everything — Run crawl, Tailor, All roles, Export, Apply / No.

3 MAKE IT YOURS

Copy `config.example.yaml` to `config.yaml`, then set:

- Your master resume path
- Roles, locations & keywords you want
- Company boards to watch (Greenhouse / Lever / Ashby)
- Your own API key

4 WHAT IT DOES

- Crawls job sources and skips roles it has already seen
- Verifies each posting is still open
- Saves every lead and status in a persistent tracker
- Builds a resume per role — rewording your real experience with the job's keywords and highlighting the matches

Full install guide is in the repo README. Tap, scan, or type the address above.

Still in progress: applying is manual for now — you submit yourself; the tool does the finding, tracking and resume tweaking.
