AI Job Search Assistant

It finds jobs for you, keeps every lead and status in one tracker, and rewrites your resume for each role - using only what's already on your resume. Nothing invented, ever.

INSTALL (needs Python 3.10+)

```
git clone https://github.com/ananyajoshi0203-cpu/ai-job-search-assistant.git
cd ai-job-search-assistant
python3 -m venv .venv && source .venv/bin/activate
python -m pip install -e .
```

RUN

Double-click run.command (Mac) or type: jobhunt app - the app opens in your browser. Buttons do everything: Run crawl, Tailor, All roles, Export, Apply / No.

MAKE IT YOURS

- Copy config.example.yaml to config.yaml
- Put YOUR master resume path, roles, locations and keywords in it
- Add the company boards you want (Greenhouse / Lever / Ashby tokens)
- Set your own key: export OPENAI_API_KEY=your-key

WHAT IT DOES FOR YOU

Crawls job sources -> skips ones you've seen -> checks each posting is still open -> saves every lead and status in a tracker that persists on your disk -> for each role, builds a one-page resume that rewords your real experience with the job's keywords, highlighting what matches.

Try the demo first (sample data): https://muse.ai/s/ai-job-search-assistant-demo-gxz6wxtulxcgixs/-5S4SsvftIjOhdFyLUiDSA2IJZ6bmLaTIDBgBvq_Egs

Still in progress: applying is manual for now - you submit yourself; the tool does the finding, tracking and resume tweaking.
